

Drinking Water Service Line Inventory Notification

The City of Bedford is focused on protecting the health of every household in our community. This notice contains important information about your drinking water. We are working to identify service line materials throughout the water system and have determined that the water pipe (called a service line) that connects your home, building or other structure to the water main is made from an unknown material but may be lead. If you previously completed the survey or are unsure if your service line has been identified, you can check at <https://bedford.in.gov/utilities/#water-line-survey>

Health Effects of Lead

Exposure to lead in drinking water can cause serious health effects in all age groups. Infants and children can have decreases in IQ and attention span. Lead exposure can lead to new learning and behavior problems or worsen existing learning and behavior problems. The children of women who are exposed to lead before or during pregnancy can have increased risk of these negative health effects. Adults can have increased risks of heart disease, high blood pressure, kidney, or nervous system problems.

What You Can Do:

- If you previously completed the survey or are unsure if your service line has been identified, you can check by entering your address at <https://bedford.in.gov/utilities/#water-line-survey>
- Depending on what is listed on the service line map at the web address above, if your material is marked unknown take the customer survey to tell us what your service line material is by using the link which will connect you to our survey or call our office and we can help you take the survey over the phone at 812-275-1626.

Steps You Can Take Now: Clean aerator(s), run cold water for at least 5 minutes before using the water for cooking/drinking, have your water tested, etc. For more information regarding steps people can take to reduce exposure to lead in drinking water, and information about opportunities to verify material of the service line, please visit <http://www.epa.gov/lead>
